Level 1

Parent: Online Store

IPS Mould Shields are transparent shields that attach to either side of your mould. As the mould opens and closes so does the shield. This acts as a barrier to contain your parts within the moulding drop zone providing permanent relief from rejects and parts spoilage. Mould Shields attach to the mould using magnets. The shields are quickly removed by simply unclipping them from the magnets to gain access to the mould and can be moved from machine to machine.

A range of sizes is available and each set includes a pair of shields, magnets and other mounting hardware.

**Section: Mould Chutes and Skirts**

Level 1

Parent: Online Store

---

IPS Mould Chutes stop your parts from scattering randomly in the drop zone. Mould Chutes ensure your parts land on your conveyor or in your packing case and not on the floor.

Mould Chutes are made of durable plastic with a PVC lining in the bottom to protect even the most delicate moulding. The unique construction will not absorb oil or grease and is abrasion, puncture, and tear resistant. Each Mould Chute is easily cleaned using simple household cleaners and there are no concertina folds to trap mouldings or dirt. Mould Chutes come in 18 standard sizes with in-line or side exit delivery chutes. Tapered Mould Skirts are available when you need to direct parts down onto a conveyor or into a box.

Standard Mould Chutes  
 Soft Drop Mould Chutes  
 Mould Skirts

## Section: Standard Mould Chutes

Level 2

Parent: Mould Chutes and Skirts

The unique design of the right angle mould chute lets it attach to each mould half. As the mould opens and closes, the mouth of the chute opens and closes providing better protection from contaminants whilst the mould is closed. Conversely, in-line mould chutes are attached to the press frame and are static. An optional single Mould Shield can be attached to the chute and the movable mould half which will cover the chute opening providing protection from part contamination. All Mould Chutes can be attached to the machine using either magnets or custom support harnesses. Velcro straps allow precise adjustment of the chute to prevent loss of parts from uncontrolled ejections.

## Section: Soft Drop Mould Chutes

Level 2

Parent: Mould Chutes and Skirts

The unique design of the Soft Drop Mould Chute lets it attach under the mould. As the mould opens your delicate parts fall gently into the Soft Drop Chute and are slowly transferred on to the conveyor. Soft Drop Chutes are designed for applications where delicate parts need to be transferred from your mould to your conveyor without scratching or marking them. In applications where you have multi cavity moulds Soft Drop Chutes can be designed to keep parts separated further reducing damage. All Soft Drop Chutes can be attached to the machine using either magnets or custom support harnesses. Velcro straps allow precise adjustment of the chute to prevent loss of parts from uncontrolled ejections.

## Section: Tie Bar Covers

Level 1

Parent: Online Store

WHY TIE BAR COVERS? Most moulders have been using them to protect their moldings from tie bar grease contamination. And it works too.

We have recently found another reason. Tie bar covers also protect the machine from the moldings. That's right. In-mould labeling is a hazard for tie bar bushings. Let a loose label get between the bushing and the tie bar and see how fast your bushings wear out.

IPS offers covers which are made of tough, oil resistant polyester material with plastic zippers. They are attached to each platen using magnetic restraints.

Tie bar covers are offered in the following sizes: Tie bar cover length = platen maximum opening and must be specified when ordering. A complete set of tie bar covers contains 4 covers complete with all mounting hardware.

**Section image file:** images/tie-bars-1.jpg
